# Voice Over IP: Next Generation Consumer Telephony Services

## Abstract:

Although the internet was not designed to carry voice and other delay sensitive streaming media, the combination of: wide bandwidth residential access, technical standards that facilitate low cost economies of scale, forbearance from taxing and government regulation, and some unique features is driving the migration of Voice Over IP (VoIP) from enterprise to consumer applications. Already the small startup pioneers are facing competition from brand name providers such as Verizon and AT&T. Poised for entry into the VoIP space are all the cable TV providers who are now moving beyond beta rollouts into expanded geographic offerings.

While there are several variations on service features and a range of costs what nearly all these VoIP services share is a cost less than 1/2 of basic circuit switched services. In addition most service providers provide the full set of class services (e.g. call waiting, conference calling, caller ID, etc) and unlimited domestic local and long distance calling for the same low flat rate.

By taking advantage of the intrinsic portability of the signaling schemes used in Session Initiation Protocol (SIP) these services typically go beyond "me-too" voice telephony and allow such expanded capabilities as multiple off premise extensions, unified messaging, presence, and multimedia support beyond just voice. In the early stages of development are hybrid combinations of wide area wireless cellular telephony together with local area wireless VoIP.

This presentation will review the recent history and current state of the art in VoIP as applied to residential public network telecommunications services. An overview of the key foundation technologies will be provided along with a look at the likely future evolution of the technology and services.

## VoIP Introduction-Circuit vs. Packet Switching

---

**Although modern public network telephony incorporates digital technology the switching fabric is circuit versus packet switched.**

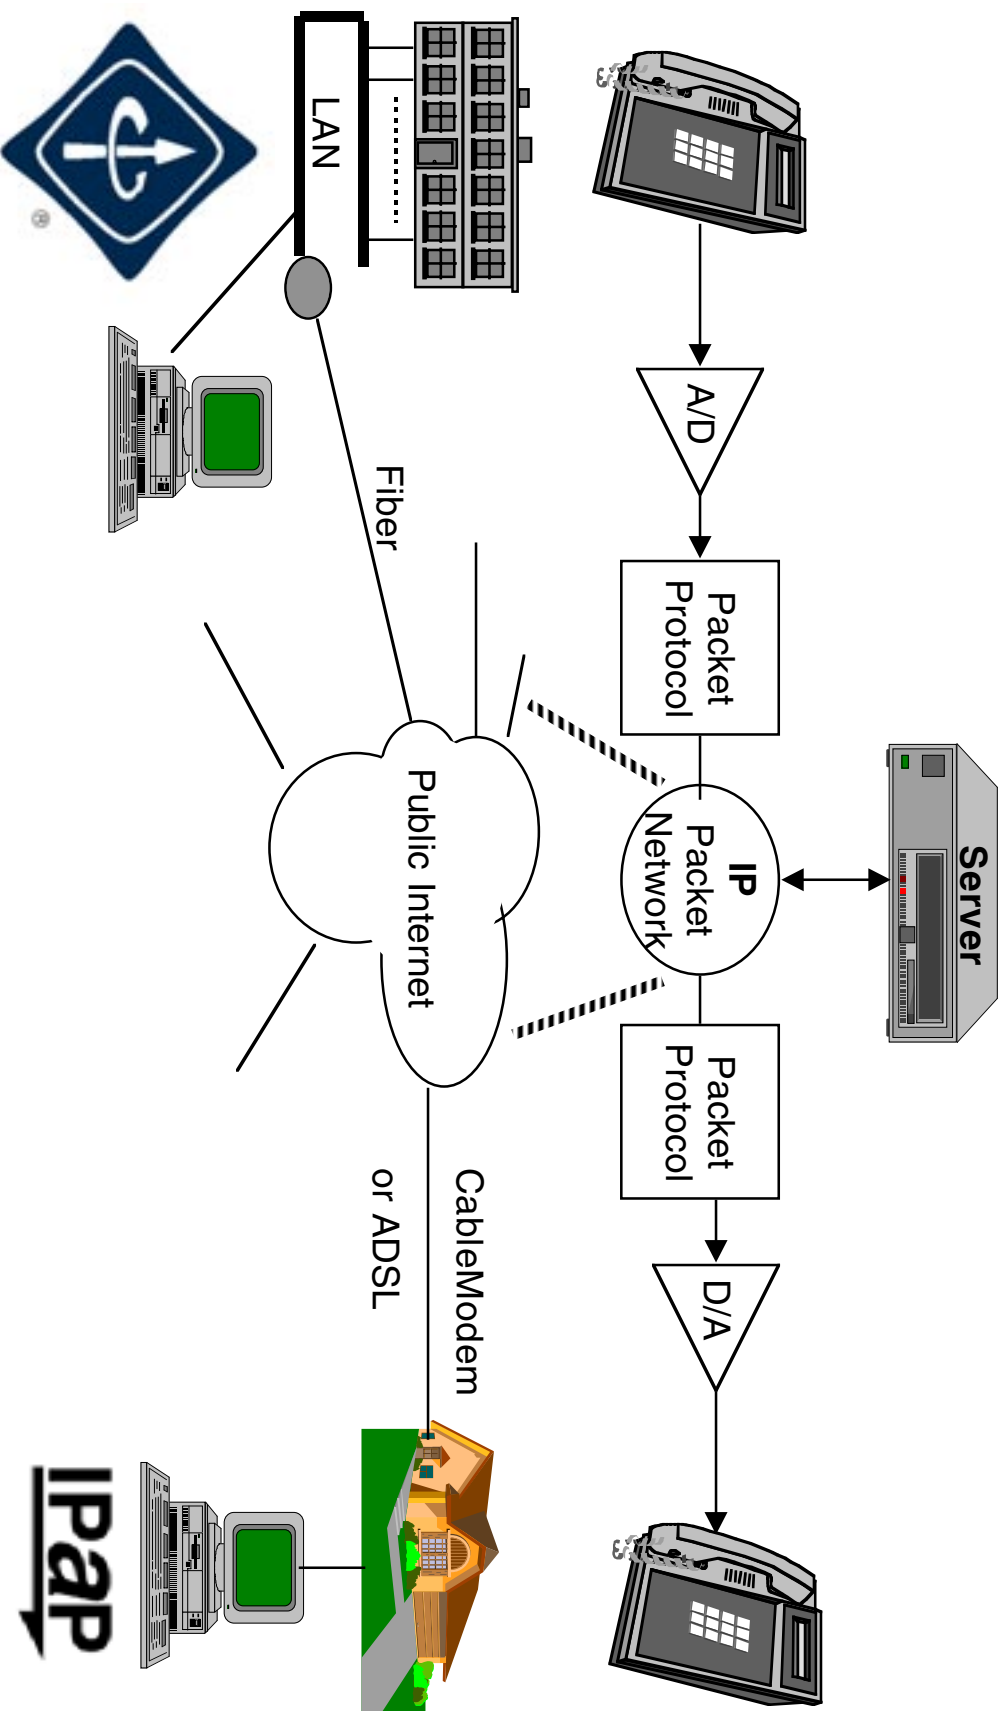

IEEE

**IPAP**

IP Action Partners

**Although modern public network telephony incorporates digital technology the switching fabric is circuit versus packet switched.**

**There are several factors in both the enterprise and consumer space driving interest and adoption of VoIP**

- Cost
  - CapEX
  - OpEX
- Flexibility
- Features
- Integration
- Regulation
- Technology
- Open Standards
- Competition

**IEEE**

IP Action Partners

**There are also several issues which pace adoption**

- Uncertain future regulation
- QoS
- Broadband residential adoption
- Open and Immature Standards

## Broadband Phone Service

VoiceWing™ is a powerful new way to get unlimited calling and great calling features. Using Voice Over IP (VoIP) technology, VoiceWing allows you to make calls over a DSL or cable Internet connection. [Learn more](#) ▶

### With VoiceWing you can:

- Make unlimited calls across town or the U.S. for one low monthly rate - including calls to Puerto Rico.
- Take your phone number with you when you travel.
- Access a full set of [calling features](#) from anywhere using your Personal Account Manager.

[Take a VoiceWing tour now!](#) ▶

## How Much?

Order VoiceWing for just **\$34.95/month**

Plus, order online and we'll **waive the set-up fee!**

[package pricing](#) ▶

## Great Features

- Caller ID
- Simultaneous Ring
- Do Not Disturb
- Enhanced Call Forwarding
- VoiceMail with E-mail Notification
- Address Book with MS® Outlook Integration
- Call Logs

## VoIP Features

---

**In addition to everything you can do with your current home phone, VoIP services provide some unique features**

- Mobility management
- Multiple appearances
- Presence
- Integration with other IP services (e.g. eMail)
- Computer integration
- Unlimited “lines”
- Flexible call routing

**IEEE**

IP Action Partners

## VoIP Flexibility

---

**There is a natural evolution toward integrated applications beyond telephony**

**Distributed games**

**Video conferencing**

**Virtual reality**

**Instant Messaging**

**Web-pages and applets**

**voicemail notifications**

**Links in e-mails**

**stock notifications**

**callback notification**

**Web-IVRs**

**Calendars**

**pre-setup conference calls**

**Click-to-dial**

**Directory Services**

**Unified Messaging**

**voicemail2email**
